                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 11853, Application US/09252991A

Patent No. 6557795

GENERAL INFORMATION:
APPLICANT: MARC J. Rubenfield et al.
TITLE OF INVENTION: AERGIGANOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERGIGANOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18
PRIOR PELING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1998-02-18
                                                                                                                                                                                                                                                                                                             445

Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1957
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1671

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/ Site 2: Not I; The library was constructed_according to Site 2: Not I; The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured mRna was size fractionated on a 1% agarose gel: First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with Not I, and then cloned directionally into pYx.Asc vector. The library tag sequence located between the Not I site and the polyh tail, is TGAGAGAGCC. This library was created for the University of Iowa Mouse Brain Molecular Amatomy Project University of Iowa Mouse Brain Molecular Amatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Instrutues of Mental Health (NIMH), Hemin Chin, Ph.D., program coordinator:"

/dev stage="1,5, and 15 days newborn"
/dev stage="1,5, and 15 days newborn"
/lab host="BH10B (T1 phage resistant)"
/clone lib="Will BMAP GVO"
/note="Organ: Brain; Vector: pXx- Asc; Site_1: EcoR I;
Site_2: Not I; The library was constructed according
Bonafo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on al% agarose
gel.First strand cDNA synthesis was primed with oligo-dr
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated with
EcoR I adaptor, digested with NotI and then cloned
directionally into pXx-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is CGAACTGAAT. This library was created for the University
lowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,

/note="Organ: Brain, Vector: pYX- Asc, Site_1: EcoR I;
Site_2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel.First strand cDNA synthesis was primed with oligo-dr
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pYX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is AGCCAGACAG. This library was created for the University
Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,

The present invention relates to new NOVX polypeptides. The invention is useful for treating or preventing a NOVX-associated disorder such as cardiomyopathy or atherosclerosis, where the disorder is related to cell signal processing and metabolic pathway modulation in a subject, considers (e.g. obesity), diabetes, infectious disease, neurodegenerative disorders (e.g. Alzheimer's disease, Parkinson's disease, neurodegenerative disorders, haematopoietic disorders and various cancers. The molecules of the invention are also useful for treating or preventing cirrhosis, contentials, learning and memory defects, infertility, congenital heart of pancreatitis, learning and memory defects, infertility, congenital heart of effects, acne, hair growth, pigmentation disorders, endocrine disorders, constroyr diseases, bone marrow transplantation, endocrine diseases, callergy and inflammatchin, nephrological disorders, urinary system callergy and inflammatchin, nephrological disorders, urinary system callergy and inflammatchin, nephrological disorders, urinary system consent nucleic acid sequence represents a NOVX gene. This sequence precedes a NOVX protein of the invention

differentiation and New human proteins associated with cell growth, differentiation death, useful for diagnosing, treating or preventing autoimmune inflammatory disorders (e.g. AIDS, allergy or anemia), cancer, atherosclerosis or hepatitis.

Claim 5; Page 175-178; 181pp; English.

The invention relates to an isolated polypeptide comprising GDD1-12 (cell growth, differentiation and death), a naturally occurring amino acid sequence at least 90% identical to GCDD, a biologically active fragment or an immunogenic fragment. Also included are the CGDD caid sequence at least 90% identical to GCDD, a biologically active polymucleotides encoding GCDD-12, a recombinant polymucleotide and a comprising the recombinant polymucleotide, an anti-doynmoleotides, a cell transformed with the recombinant polymucleotide, a transgenic organism comprising the recombinant polymucleotide and a antibody, screening for compounds which bind to/modulate or are companists of GCDD polymucleotide microarray. The polypeptides, polymucleotide microarray. The polypeptides, polymucleotide microarray. The polypeptides, polymucleotide and a agonists are useful for diagnosing, treating or preventing disorders associated with aberrant expression of GCDD, polymucleotide microarray. The polypeptides, polymucleotides, polymucleotide microarray engines associated with aberrant expression of GCDD, polymucleotide microarray engines, an entit of a particularly cell proliferative (e.g. arteriosclerosis, atherosclerosis, propartitis, paroxysmal nocturnal haemoglobinuria, polycythaemia disorders (e.g. renal tubular acidosis, anaemia or mental retardation) cell-popsy), reproductive disorders (e.g. Alzheimer disease, Parkinson's disease or the menstrual cycle), or autoinmune/inflammatory disorders (e.g. AlDS, thyroiditis, contact dermatitis, Crohn's disease, diabetes mellitus, contact dermatitis, crohn's disease, diabetes mellitus, contact dermatitis, crohn's disease, diabetes mellitus, contact dermatitis, parasitic, proteins associated with cgdD. The present sequence encodes contact dermatitis associated with cgdD. The present sequence encodes

pharmacogenomics. P~PSDB; ABB98401 

The present sequence is a coding sequence for a NOV protein. The NOV proteins and coding sequences are useful for treating or preventing NOV-associated disorders or in the manufacture of a medicament for treating the disorders, such as cancer, heart disease, inflammation, autoimmune disorders, allergies, blood disorders, AIDS, diabetes, obesity, asthma, IgA nephropathy, cirhosis, arthritis, AIDsheimer's disease, infections (e.g. bacterial, viral, parasitic), stroke, muscular dystrophy, epilepsy, and other wasting disorders associated with chronic diseases. NOV1 is a TEN-M4 like protein and the NOV1 gene is localised to chromosome 11 NOVX polypeptides and encoding polynucleotides, useful for preventing treating NOVX-associated disorders e.g. cancer, inflammation, or Alzheimer's disease, and in chromosome mapping, tissue typing or Claim 9; Page 8-9; 358pp; English.

The present invention describes primer sets for synthesising 5602 full-

[ ength cDNAs defined in the specification. Where a primer set comprises:

[ al an oligo-dr primer and an oligonucleotide comprises one of the 5602 complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the nucleotide comprises at least 15 nucleotides; or (b) a combination of a nolynucleotide which complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the polynucleotide which comprises a 3'-end sequence of polynucleotide which comprises a 1'-end sequence of polynucleotide comprises at least 15 nucleotides and the combination of configuration. The primer sets can be used in antisense therapy and in specification. The primer sets can be used in antisense therapy and in specification. The primer sets can be used in antisense therapy and in specification. The primer sets can be used in antisense therapy and in specification. The primer sets can be used in antisense therapy and in specification. The primer sets can be used in suffer the principal confides, particularly full-length cDNAs. The primers are also useful for the centric and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the AAH313633 to AAH313633 to AAH313633 to AAH313633 to AAH313632 to AAH33632 represent the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Primer sets for synthesizing polymucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length
                                                                                                                                                                          detection; diagnosis; antisense therapy; gene therapy; ss.

2002-732706/79. P-PSDB; ABP53588. New NOVX polypeptides and polynucleotides useful for treating NOVX-associated disorders, such as cancers, neurological disorders, disorders of vesicular transport, gastrointestinal disorders, and autoimmune

Claim 8; Page 119-121; 444pp; English.

The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, cytostatic, anticonvalsant, cerebroprotective, nocitopic, cardiovascular, antidiabetic, antianlergic, antiantenticic, virucide, immunosuppressive, antiallergic, antiantentic, antibatchritic, virucide, immunosuppressive, antiallergic, antinanaemic, antibacterial, fungicide, protozoacide and antihelminthic activities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the manufacture of a medicament for treating a syndrome associated with a human disease selected from NOVX-associated disorder, such as cancers (e.g. petitedenia, lymphoma, melanoma or cancer of the liver, lung, muscle, covary, testis and uterus), neurological disorders (e.g. epitepsy, stroke, ischaemic cerebrovascular disease, Alzheimer's disease or pick's disease, disorders (e.g. ulcerative colitis, or gattric and duodenal disorders), autoimmune diseases (e.g. ulcerative colitis, or gattric and duodenal disorders), autoimmune diseases (e.g. allergic reactions, autoimmune haemolytic and protozoal infections. The NOVX proteins can be used as immunogens to produce antibodies and as vaccines. The NOVX nucleotide sequences may be biological samples (tissue typing), and in forensic identification of a hiological samples (tissue typing), and inferensic identification of a hiological samples (tissue typing), and inferensic identification of a hiological samples (tissue typing), and inferensic identification of a sample. The present sequence encodes human NOV15c, which biological s located on c

where X is 1 to 20 e.g. NOV1. NOVX sequences can have neuroprotective, where X is 1 to 20 e.g. NOV1. NOVX sequences can have neuroprotective, cytostatic, anticonvulsant, cerebroprotective, nototropic, cardiovascular, antidabetic, antimilalmametory, antitheumatic, antibatchritic, virucide, immunosuppressive, antimiallergic, antianaemic, antibacterial, fungicide, protozoacide and antihelminthic activities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the manufacture of a medicament for treating a syndrome associated with a human disease selected from NOVX-associated disorder, such as cancers (e.g. -putkaemia, lymphoma, melanoma or cancer of the liver, lung, muscle, ovary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, ischaemic cerebrovascular disease, Alabeimer's disease or pick's disease, disorders of vesicular transport (e.g. cystic fibrosis, diseases), disorders of vesicular transport (e.g. cystic fibrosis, diseases), disorders (e.g. ulcerative colitis, or gastric and duodenal disorders), and protozoal infections. The NOVX proteins can be used as immunogens to anaemia, or theumatoid arthritis), viral, bacterial, fungal, helminthic and protozoal infections. The NOVX proteins can be used as immunogens to used in chromosome mapping, identifying individuals from minute biological samples (tissue typhng), and in forensic identification of a bological sample. The present sequence encodes human NOV15d, which is The present invention describes novel human proteins designated NOVX. on chromosome 4 biological samples biological sample. located on chromoso

The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOV1. NOVX sequences can have neuroprotective, where X is 1 to 20 e.g. NOV1. NOVX sequences can have neuroprotective, cytostatic, anticonvulsant, cerebroprotective, noticarchitic, virucide, antidiabetic, antiallergic, antialtergic, antiarthritic, virucide, immunosuppressive, antiallergic, antiantendic, antiarthritic, virucide, continuosuppressive, antiallergic, antiantendic, antiarthritic, virucide, immunosuppressive, antiallergic, antiantendic, in gene control of an antiallergic, antiantendic, antiantendic, in gene control of a medicament for treating a syndrome associated with a mandacture of a medicament for treating a syndrome associated with a human disease selected from NOVX-associated disorder. Such as cancers (e.g. el-examin, lymphoma, melanoma or cancer of the liver, lung, muscle, ovary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, ischaemic crebrovascular disease, Alzheimer's disease or pick's cancer, disease, disorders (e.g. orgatic fibrosis, diseases), disorders (e.g. ulcremin diseases (e.g. ulcremin diseases), control of a disorders (e.g. ulcremin diseases) control of a cutoimmune diseases (e.g. ulcremin diseases) or gastric and quodenal disorders), cancernia, or rheumatoid arthritis), viral, bacterial, fungal, helminthic and protozoal infections. The NOVX proteins can be used as immunogens to produce antibodies and as vaccines. The NOVX proteins can be used as immunogens to biological samples (tissue typing), and in forensic identification of a biological samples (the present sequence encodes human NOV15b, which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TyrTyrileGlyAlaAspGlySerLeuArgLeuLeuLeuAlaAsnGlyMetGluValAla 20

Liu X;

Eisen A,

The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, cytostatic, anticonvulsant, cerebroprotective, noticathritic, virucide, immunosuppressive, anticallergic, antitanematic, antibacterial, fungicide, proteozoacide and antihelminthic activities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the manufacture of a medicament for treating a syndrome associated with a human disease selected from NOVX-associated disorder, such as cancers convary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, ischaemic cerebrovascular disease, Alzheimer's disease or Pick's disease, disorders of vestcular transport (e.g. epilepsy, stroke, clabetes mellitus, Grave's disease, astrointestinal disorders (e.g. ulcerative colitis, or gastric and duodenal disorders), autoimmune diseases (e.g. allergic reactions, autoimmune hamolytic and protozoal infections. The NoVX proteins can be used as immunogens to produce antibodies and as vaccines. The NOVX nucleotide sequences may be used in chromosome mapping, identifying individuals from minute cological samples (tissue typing), and in forenatic identification of a biological sample. The present sequence encodes human NOV15a, which is
